Hello,

this is just to remind you that the handover of the project #1 is due to next Tuesday (March 24).

http://mrl.cs.vsb.cz/people/fabian/uro_course.html

As we are still in the mode of distance learning (and according to my information, we will be at least until the end of this month), send me your projects (two py scripts) by email. Please, make sure that I will be able to run it with standard installation of Python 3.8.x (otherwise provide me additional information how to run your scripts).

Also note that I have updated the archive with the hints I have discussed with some of you.

http://mrl.cs.vsb.cz/people/fabian/uro/p1_hints.zip

In case of any troubles, send me an email with your actual source code and the exact description of your problem.

During the next week, I will send you information about the Qt/C++ and the project #2.

Best regards,

Tomas Fabian

Hello,

I have been informed that your classes have been suspended for two weeks from now. Based on that Dean's decision, I am sending you the assignment of the first project and some additional references. The goal is to implement the assigned GUI in Python and Tk. The result should be visually similar to the assigned original.

The handover of this project is planned for March 24.
